## Specialist Live-Guided Work-Ups... Performed By You!

**Work together with VVS, keep your referrals in-house.**

VVS technology allows you and your team to work together with our experienced specialists on clinical cases, in real-time. Offering specialist-guided cardiac work-ups, abdominal ultrasound and more, for your patients in your practice. This experiential learning opportunity also counts as CPD!

### So what happens in a live-guided cardiology work-up?

- The VVS specialist will be with you remotely throughout the consultation via the VVS workstation. The workstation is easy to use, the VVS team are on hand to help and provide any tech support.
- Using the digital stethoscope and ECG you will auscultate the patient and assess the ECG together with our friendly VVS cardiologist.
- The cardiologist will guide you through the echocardiogram, including support with optimising your images and probe positioning. They will discuss the images with you and point out normal and abnormal features on your ultrasound screen in real-time.
- Ask questions and enjoy a conversation with the specialist, as if you are in the same room.
- You will receive a full specialist written report following the scan, with a summary of the investigations, treatment recommendations and a clinical plan. You will also have easy and convenient access to follow-up advice from the VVS specialist team.

**Approach every case with confidence.™**

Cardiology. Diagnostic Imaging. Internal Medicine. Feline Medicine. Dermatology. Neurology. Anaesthesia. Ophthalmology. Oncology. Exotics. Dentistry.
